

## “Knowing your Site and Sticking to It”

---

### **Biography:** Dr. Andrew Cornett, National Research Council of Canada

Andrew is currently leading the Marine Infrastructure, Energy and Water Resources research program for the National Research Council of Canada. The program conducts technical R&D addressing customer needs related to marine infrastructure, marine renewable energy technologies, and water resources engineering and management. His research interests include wave and tidal energy resource modelling and assessment, as well as energy converter technology modelling and development. Andrew earned his doctorate in Coastal and Ocean Engineering from the University of British Columbia. As Adjunct Professor with the University of Ottawa, he helps mentor graduate students, supervise thesis research and develop collaborative research projects.
