

## “The Social Life of MRE”

**Abstract:** Mr. Bruce Cameron, Nova Scotia Department of Energy

---

### ***Update on Tidal Development in Nova Scotia***

Research is a necessary activity to support the deployment of in-stream tidal devices and the development of a marine renewable industry. However, our ability to conduct practical research activities is also dependent upon the deployment of in-stream devices. Thus 2015 will be both a key year for the development of the Marine renewable Energy Sector in Nova Scotia and the advance of the in-stream tidal agenda. Mr. Cameron will speak to the work of the Department of Energy in fostering international research linkages, as well as development and regulatory partnerships. He will also speak to the Province’s continuing work to ensure there is a predictable, effective and efficient regulatory regime for the industry.
