

## “Sustainable Conservation – Heading for Harmony”

**Abstract:** Ms. Rochelle Owen, Dalhousie University

---

### *Sustainable Transportation – Changing Connections*

Like many energy systems, sustainable transportation success include fast and reliable connections, scale relevant interventions, and peak management. Dalhousie and partners have been studying a number of options for increasing sustainable transport success from directed shuttles, Transportation Management Associations, to cycling infrastructure. Key concepts for success include relevant pricing structure, formalized partnerships, integrated connections, and shared resources. Some findings on recent studies will be shared along with thoughts for the future.
