

Abstract: Mr. Tony Wright, Fundy Ocean Research Center for Energy (FORCE)

The Fundy Standard: Catalyst to a Successful Global Tidal Sector

The past year has witnessed significant milestones in the tidal energy sector, and Nova Scotia has built a strong case for the development of a successful industry in the region. FORCE, in particular, has played a key role in supporting and coordinating efforts by many players to advance the sector, and remains focussed on reducing barriers to entry for both developers and the scientific community. This presentation will highlight significant recent achievements at FORCE and important next steps that will pave the way for the installation of the first grid connected marine current turbines in Canada - and is now in the race to host what could be the first grid-connected turbine arrays in the world.
